EDUCATION

Cornell University, M.Eng. Computer Science (4.0 GPA, *summa cum laude*) 08/2023 – 05/2024
Texas A&M University, B.S. Computer Science (3.9 GPA, *magna cum laude*) 08/2018 – 12/2021

EXPERIENCE

Gann Law New York, NY
Senior Software Engineer 11/2025 – Present
- Spearheaded migration of legacy ColdFusion, Visual FoxPro systems to modern Python, Django, PostgreSQL stack
- Developed internal tooling to advance critical business decisions and enhance marketing outreach to customers
- Conducted statistical analysis to reconcile customer database after a significant company and product acquisition

J.P. Morgan Houston, TX
Software Engineer II 02/2023 – 08/2023
- Utilized reactive programming (RxJS) techniques to compose async functions to concurrently handle multiple trades
- Automated regression testing using Playwright to bypass manual test configuration and help expedite QA
- Led team in complete rewrite of legacy unit tests as part of migration to modern React Testing Library

Software Engineer I 02/2022 – 02/2023
- Extended ability for traders to price and structure options contracts by developing features for their trading system
- Built functional components using React, TypeScript, and Redux to modernize legacy trading systems at the firm
- Conducted extensive unit testing using Jest and Enzyme after the implementation of each new feature

Software Engineer Intern 06/2021 – 09/2021
- Developed an elaborate report builder application to aggregate orders executed by futures and options traders
- Utilized React and Handlebars to enable traders to manipulate field names, and redesign and reposition columns
- Built a complementary report viewer app which can be integrated with existing trading platforms to read reports

American Express New York, NY
Software Engineer Intern 06/2020 – 09/2020
- Deepened the breadth of an application security testing tool using Python to scan for new URL endpoints on network
- Designed immersive Splunk dashboard panels to ingest raw data and display live feeds with critical information
- Wired REST endpoints to request data from WhiteHat and Jira in real-time and feed it back to the panels

SKILLS

Languages/Systems: Python, JavaScript, TypeScript, SQL, Java, C++, Linux, Windows, macOS
Frameworks/Tools: React.js, Next.js, Node.js, Redux, ReactiveX, GCP, Jest, Testing Library, Playwright, PostgreSQL

PROJECTS

xG: Football Analytics 11/2023 – 01/2025
- Designed a football match prediction framework to predict the probability of a goal occurring in Python
- Developed a web scrapper to extract data from scoreboards, then sanitized and structured it into a digestible format
- Hosted data on Google Cloud to then be parsed into relevant metrics using Pandas and visualize match trends

Pitch, Don't Kill My Vibe 01/2024 – 05/2024
- Developed a full-stack Next.js application which allows startup founders to get feedback on their ideas from investors
- Configured Firestore database on Google Cloud to store pitches and users as separate collections on the back-end
- Integrated Firebase Auth to verify users and assign roles, VC or founder, needed for the app to dynamically function

Lumichain 05/2020 – 07/2020
- Designed a cryptocurrency based on the ERC-20 standard in Solidity and an ICO dashboard in React.js and Web3.js
- Allows traders to fulfill basic send and receive transactions on the Rinkeby Test Network using MetaMask extension

Holiday Planner 08/2020 – 12/2020
- Created a 3-step holiday planner which incorporated flights, hotels, and entertainment options using REST APIs
- Designed a client-facing interface using HTML, CSS, and JavaScript which enabled users to customize selections
- Personalized all aspects of the trip including prices, ratings, and reviews using Triposo, Amadeus, and MediaWiki

Augmented Snake Game 01/2019 – 05/2019
- Modified the game using Message Passing Interface to run multiple instances in parallel on a Raspberry Pi cluster
- Employed a reinforcement learning feedback loop in Python to improve performance in an evolutionary manner
